

Professional Cablemanagement

Orbit[®]

Orbit®

Cable-Snake® Orbit® is the first world-wide individualized cable guiding system.

The main parts of the cable chain system comprise a patented bayonet connector on which various chain forms can be mounted according to the customers' designs and demands. The eight basic forms consist of Bio-plastic, metal, glas, wood or your desired material.

With a „click“, the Gecko® magnetclip connects the system to steelfurniture or cablechannel.

Cable snake Orbit® can be attached tool-free to Cable duct Orbit®. High-class surfaces like premium steel, aluminium or chrome accentuate the high aspiration on design and function.

With the widespread Orbit® system we first-time succeeded to present an individual Cable management building set, which can be adapted to Cable quantity and customized demands on design, form and colour.
